winicon

Description

dwm-winicon is a patch that enables dwm to show window icons.

It is recommended to enable the compiler optimization flags: **-O3** and **-march=native** to enable auto loop vectorize, which leads to better performance.

The patch is being managed and developed on this GitHub [repo](#). If you discover any bugs or have any idea to optimize it, feel free to create an issue there.

Dependency

The patch depends on `lmlib2` for icon scaling, which can be easily installed in most distros.

Arch Linux:

```
sudo pacman -S lmlib2
```

Debian:

```
sudo apt install libimlib2-dev
```

Configuration

```
#define ICONSIZE 20 /* icon size in pixels */
#define ICONSPACING 5 /* space (pixels) between icon and title */
```

There are also some practical macro hacks:

```
#define ICONSIZE bh /* make icon size equals to bar height */
#define ICONSIZE (bh - 4) /* or adaptively preserve 2 pixels each side */
```

Alpha Patch

If you also use [alpha patch](#), some modifications are needed to make dwm work correctly.

- Replace (in `drw.c`, `drw_create` function)

```
drw->picture = XRenderCreatePicture(dpy, drw->drawable, XRenderFindVisualFormat(dpy, DefaultVisual(dpy, screen)), 0, NULL);
```

with

```
drw->picture = XRenderCreatePicture(dpy, drw->drawable, XRenderFindVisualFormat(dpy, visual), 0, NULL);
```

- Replace (in `drw.c`, `drw_resize` function)

```
drw->picture = XRenderCreatePicture(drw->dpy, drw->drawable, XRenderFindVisualFormat(drw->dpy, DefaultVisual(drw->dpy, drw->screen)), 0, NULL);
```

with

```
drw->picture = XRenderCreatePicture(drw->dpy, drw->drawable, XRenderFindVisualFormat(drw->dpy, drw->visual), 0, NULL);
```
